Chapter 13: Standard Accounting Extract, Version 3

This extract is primarily used as the source of data that will ultimately be imported to the client General Ledger or Accounts Payable system. This feed, however, contains a wide range of data to accommodate a broad range of integration needs. The client will have to create a bridge program in order to capture the required data from this feed and import it to the financial system.

IMPORTANT - Two Import Chapters

There are separate chapters for the different versions of the extract:

- Standard Accounting Extract, Version 2
- Standard Accounting Extract, Version 3
With additional Future Use and other fields.

Verify with Concur that you are using the proper extract chapter.

Security of Data

Data provided by the client to Concur is encrypted in transit to prevent exposure of sensitive information.

Extract File Contents

The extract file contains the following:

- Batch Constants
- Employee Level Data
- Report Level Data
- Entry Level Data
- Credit Card Level Data
- Entry Level Data

- Journal Level Data
- Car Mileage Level Data
- Cash Advance Level Data
- Allocation Level Data
- Travel Allowance Level Data
- Tax Level Data
- Assigned Travel Request Level Data
- Additional VAT Tax Level Data
- Company Bill Statement Level Data
- Expense Pay Level Data
- Employee Level Data
- Report Level Data
- Cash Advance Level Data
- Report Entry Level Data
- VAT Tax Level Data
- Request Level Data

All the different data elements are included in each row.

The extract file defaults to a .txt formatted file with | (Pipe) delimitation. If the extract definition is configured to generate multiple files, Expense will generate a .ZIP file containing multiple .txt files.

The specific data elements in the AP/GL file are listed below.

Text Case: Best Practice

The Import/Extract Administrator has the option of generating an output file for an extract. If this is done it is best practice to select the As Entered option under **Text Case** in the **Add Output File** page as shown in the figure below:

Field Attribute Defaults

Date Format: * yyyy-MM-dd

Text Case: As Entered ▼

Decimal Implicit:

Decimal Places:

Doing this ensures that all characters are represented as entered and prevents arbitrary character selection where no lowercase or uppercase exists for a value entered in the extract. As an example, there is no uppercase equivalent of the German character "ß". If an uppercase rendering is requested using the Text Case option the system converts this to "SS", a two character field value that exceeds the field length and generates an error.

Decimal Places: Best Practice

Starting with Service Update 53 (March 2010) the decimal setting for all new companies is set to 4 (".0001") places beyond the decimal. All existing entities will not have this setting changed - this will apply only to those companies created following the SU53 release. This change applies to all amount-based fields.

The Import/Extract Administrator can view this setting in the **Decimal Places** field in the **Add Output File** page as shown in the figure below:

Field Attribute Defaults

Date Format: * yyyy-MM-dd

Text Case: As Entered ▼

Decimal Implicit: ☐

Decimal Places: 4 ▼

Decimal Character: . (period) ▼

Refer to Implementation personnel for additional information about this change.

Scheduling the SAE and Invoice Pay Extract Cycles

Please note that Invoice Pay clients must choose a daily SAE schedule (not weekly). This is because Invoice Pay runs daily (it is the optimal payment frequency, and only available choice) and pay and extract cycles must be aligned to ensure no records are excluded from the extract.

Using the *Is Emergency Check Run?* Field to Expedite Payment in Invoice

When a pending request that will be late for payment must be expedited within a 24-hour cycle, the client may draw on the use of the **Is Emergency Check Run?** check box field to do this. This field, available in **Invoice Admin > Forms & Fields**, is added to the Payment Request Header form, and optionally associated with an “Emergency” policy (as an example) so that, when selected, an attribute is added to the request denoting that rapid payment is required.

Now, the late request is queued, and the client may take advantage of the optional, additional extract job (Standard Payment Request Accounting Extract (Emergency)) that executes within the default 24-hour cycle, allowing rapid approval and extract so that a late payment found in the morning may result in a check-based payment to the vendor that afternoon.

This feature is in no way related to Invoice Pay – it is instead a payment feature for clients who do their own payments outside of Invoice Pay.

NOTE: The client may need to work with Concur Support to set up the Standard Payment Request Accounting Extract (Emergency) job run that supports this feature.

File Header

Col #	Source (table.column)	Description/Format/Source	Max Length	Client Field Definition
1	Constant	The value "EXTRACT" will be inserted into the first position of the extract. By having a constant in the file header, an extract file is always produced, even if there are no reports ready to be extracted.	7	
2	Batch Date	Batch Date Format: YYYY-MM-DD	10	
3	Record Count	Count of the detail records in the file Source: Calculated when file is created	10	
4	Journal Amount Total	Total that sums all journal amount columns in the journal rows Format: 0.00 Source: Calculated when file is created	23	
5	Batch ID	Batch ID Format: Starts with number 1 and increments sequentially	13

41	CT_REPORT. CUSTOM1	Report Custom 1	When the custom fields (as opposed to ORG_UNIT fields) are also employed on the employee record for accounting data, these fields are copied to the report level. Data is recorded at the report level for reporting purposes. In the event an employee's organizational data changes over time. This ensures that the point in time accounting data for an expense report is accurate and not changed in the future if employee data is changed. Format: The seventh segment (if necessary) in the fully qualified GL string should use Custom1, except the natural account field; the natural account data is stored in column 167	48	
42	CT_REPORT. CUSTOM2	Report Custom 2	Format: The eight segment (if necessary) in the fully qualified GL string should use Custom2, except the natural account field; the natural account data is stored in column 167	48	
43	CT_REPORT. CUSTOM3	Report Custom 3	Value copied down from Employee Custom field of the corresponding number.	48

Appendix 1: Balance Due Management

The Balance Due Management option provides a tool for tracking balances due from employees to the company, and for collecting those funds against future reports.

How It Works

When activated, an expense report with a balance due to the company from the employee will generate an internal tracking record for that balance due to the company. A subsequent report with an amount due the employee from the company will automatically have this balance applied at the point in time that the processor approves the report for payment, netting out the amount due to the employee against the amount remaining that is due to the company from the prior report.

If the outstanding amount due company is not fully utilized, the remaining balance continues to be tracked and applied to another future report. If a report with an applied balance tracking record is recalled, the balance tracking amount is removed from the report and may then subsequently be re-applied when that report is again approved by the processor.

What the User Sees

The employee will see a new row on the report totals page for a report with a balance due applied so that they can see why the cash due to the employee has been reduced.

If for some reason the balance tracking record needs to be adjusted – perhaps the employee has paid the amount to the company – the cash advance administrator may record the amount paid against that balance and thus reduce the outstanding balance.

The information on the internal balance tracking record creation (issuance) can be included in the standard accounting extract by configuring it to include cash advance records. The data will appear in a record similar to a normal cash advance with three specific differences:

- **Report ID** field will identify the report that generated the balance due to the company
- **Report Key** will also identify that same report
- **Cash Advance Transaction Type** will be **3**

The following example demonstrates key fields in the accounting extract for a balance tracking record and a traditional cash advance issuance record, both for 50.00:

Report ID	Report Key	Journal Key	Expense Key	Description	Payer	Payee	Amount	Account Code	DR/ CR	Cash Advance transaction Type	Cash Advance Request Amount
7CECDDC0E40 040CBA23C	10004	100000		Balance tracking issuance record	COMP	EMPL	50	Employee cash advance clearing account	DR	3	50
		100001		Regular Cash advance issuance journal entry	COMP	EMPL	50	Employee cash advance clearing account	DR	1	50

The application of the balance tracking record will also impact the financial extract, and will show information about the source of the funds used to net against the amount due employee. This is always included, and is not controlled by the inclusion of cash advance records.

The following example demonstrates the key information in the expense journal records when a cash advance or balance due record is utilized as payment for the amount due employee:

Report ID	Report Key	Journal Key	Expense Key	Description	Payer	Payee	Amount	Account Code	DR/ CR	Cash Advance transaction Type	Cash Advance Request Amount

Report ID	Report Key	Journal Key	Expense Key	Description	Payer	Payee	Amount	Account Code	DR/ CR	Cash Advance transaction Type	Cash Advance Request Amount

Configuring the Balance Due Management Feature

The balance due tracking feature may be enabled per policy, so that reports under that policy will generate a balance tracking record for application on any future report (regardless of policy).

Clients wishing to activate this option should first ensure that their financial systems receiving the data from Concur Expense are prepared for the new information. When they are ready to activate the tracking, submit a change request to Concur Support that identifies the policies for which to activate the balance due tracking.

To edit, refer to the *Expense: Policies Setup Guide*.

Appendix 2: Cash Advance Issuance Records

The Cash Advance issuance record may be optionally included in the Standard Accounting Extract and any other financial extracts. This allows for company processes where the issuance is executed outside of Concur or via the data coming from Concur to the financial systems.

There are some special circumstances that have unique handling:

1. **Cash Advance Issuance paid via Expense Pay.** If the employee is reimbursed for expense reports via Concur's payment services such as Expense Pay, then the cash advance issuance may also optionally be paid via the same service.
2. **Cash Advance Issuance via CBCP ATM Withdrawal.** When a cardholder obtains an ATM cash advance via their company card and the payment type of that card is **CBCP**, the event creates an issuance record for the financial extract.

These cash advance issuance records may be included in the financial extracts so that they are tracked within the financial systems.

3. **Cash Advance Issuance via IBCP ATM Withdrawal.** When a cardholder obtains an ATM cash advance via their company card and the payment type of that card is IBCP, the event creates NO liability for the company within Concur as the employee is responsible for repayment of the advance. Because of that, there is no cash advance issuance record included in the financial extracts.

There will be one issuance record for a cash advance issued within Concur. The issuance record can be identified by the Cash Advance Transaction Type which will always be a '1'. The Payer is the Company and the Payee is the Employee. The Journal Amount is a DR transaction in the reimbursement currency. The Cash Advance Amount is the amount of the cash advance in the currency of issuance. The Account Code is the clearing account code which was configured for the employee in the profile.

1121	7/10/2015	Cash Advance	REG	COMPANY	EMPLOYEE	\$300.00	DR	5009990	300.00	1

For the same example, but for cash issued as an ATM cash withdrawal for a CBCP company card, the record is similar. The data on the ATM withdrawal transaction will appear in the first scheduled extract after the credit card cash advance transaction has been loaded to Concur from the card supplier. The Account Code in this case is the clearing account code which was configured for the CBCP corporate card payment type.

Application Extract for Cash Advance

The application of a cash advance will include offsetting records to recover the cash advance. Consider this example:

The user has received a \$300 cash advance issued through Concur. In the course of travel, the user incurs the following cash expenses: 245.00 on a rental car, \$67 on a business meal and \$10 on parking. The user assigns the \$300 cash advance to an expense report, enters the three cash expenses and submits. The expenses are not itemized. The expenses are legitimate business expenses.

The application phase of this case will create five records in the standard accounting extract file. Three of the records will cover the three cash out-of-pocket transactions. These three transactions are handled in the same way all cash, out-of-pocket transactions are handled. The two additional records are unique to an expense report containing a Cash Advance. The system will attempt to recover the cash advance amount from the employee by creating credit records against the cash transactions until the total of the cash advance is recovered. In this example, the first cash advance record (entry_id 1243) credits the entire \$245 of its companion record (entry_id 1240). That still leaves \$55 of the cash advance unrecovered. Another credit record (entry_id 1244) for \$55 will be created against the next companion cash expense record (entry_id 1241). At this point, the \$300 cash advance has been recovered. The credit journal amounts have the effect of offsetting the total amount due the employee by the amount of the cash advance.

These offset records will have the following characteristics: the Payer is the employee; the Payee is the company. The Debit/Credit indicator will always be 'CR'. The Cash Advance Amount field will always contain the total of the cash advances applied to the expense report. The Cash Advance Transaction Type will be a '2'. The employee will receive the net of the total cash expenses less the cash advance amount; in this example, \$22.
